Flame Test Lab

*****The lab handout from class looks a little different than this handout, but the ***** table and the questions are the same.

Observations & Data

Table 1: Flame Test Observations

solution	metal ion present	colored sketch of flame	written description of color(s) observed
NaCl			
KCl			
CaCl ₂			
SrCl ₂			
CuCl ₂			
unknown			

Calculations & Conclusions

1. Discuss some of the limitations of using flame tests to identify ions present in solution.
2. Propose at least one possible method for improving the accuracy of results in this laboratory experiment.
3. A green line of wavelength 486 nm is observed in the emission spectrum of hydrogen. Calculate the energy of one photon of this green light. Use the following mathematical relationships:

[Where ν = frequency, c = speed of light, λ = wavelength, h = Planck's constant, E = energy]

$$\nu = \frac{c}{\lambda} \qquad E = h\nu$$

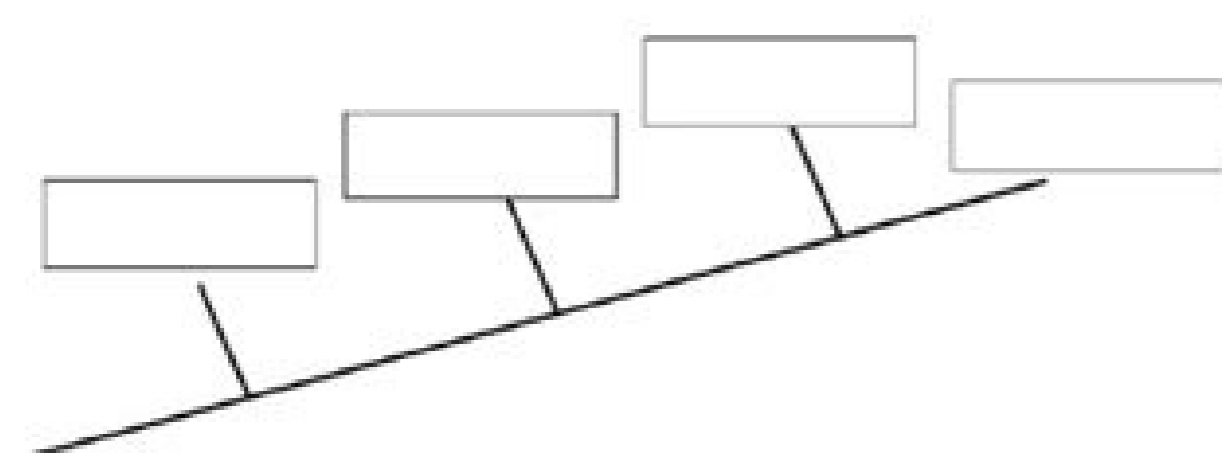

Name: _____ Yr. & Sec.: _____ Date: _____ Score: _____

Cladogram Worksheet

Fill in the following table. Mark an "X" if an organism has the trait.

	cells	legs	6 legs	wings
Worm				
Spider				
Carpenter Ant (black)				
Fly				

1. Add each of these organisms to the cladogram below: worm, spider, ant, fly
2. USING complete sentences, explain why you put each organism where you did on the cladogram.

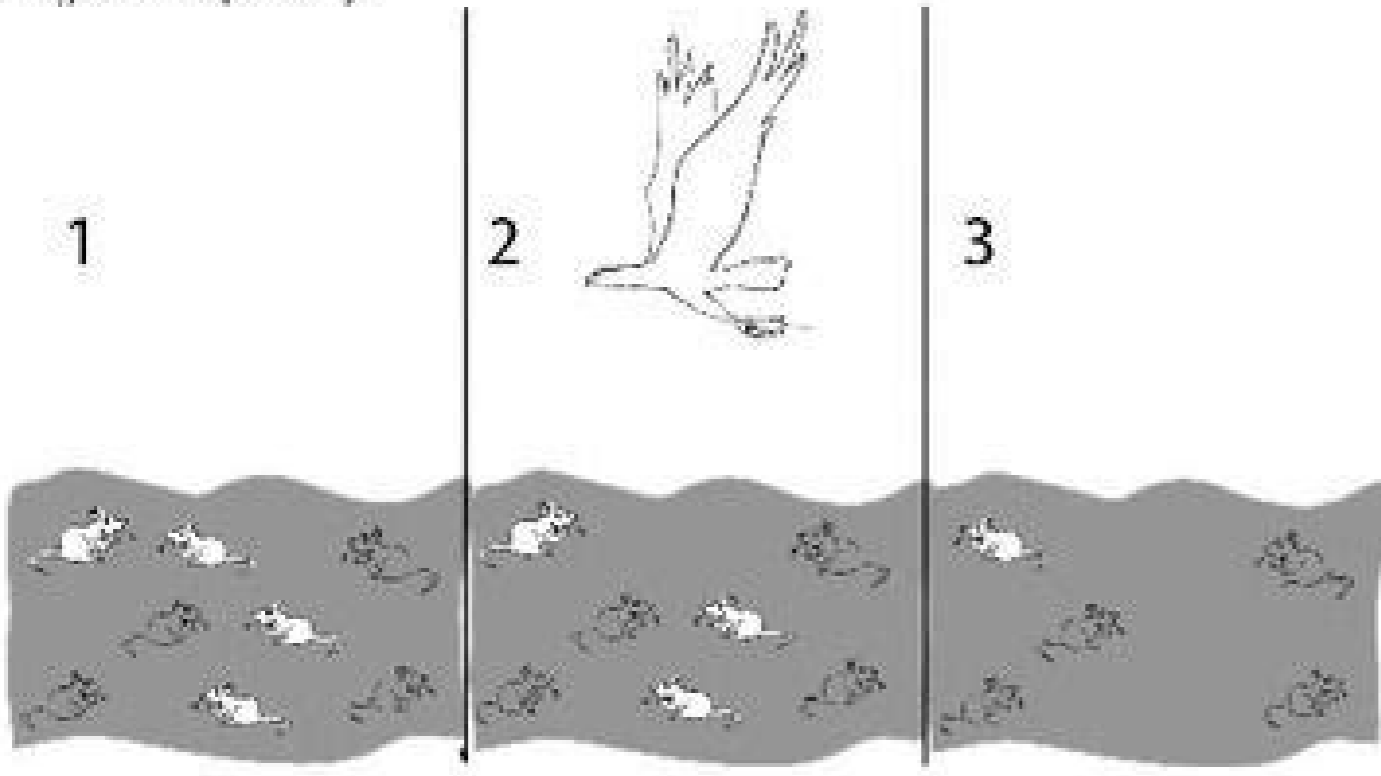

3. On the cladogram above, add traits that make the organisms different from each other.
4. According to your cladogram, which two species are more closely related: worms and spiders or worms and ants? How do you know?
5. According to your cladogram, what species are flies most closely related to? How do you know?

Evolution by Natural Selection

Adapted from the University of California, Los Angeles, Life Sciences 1 Demonstration Manual
Copyright 2012 by Drs. Jennifer Doherty and Nigel Waldron, Department of Biology, University of Pennsylvania.

★ Describe what is happening in figures 1-3. Is the population of mice different in figure 3 than in figure 1? Explain why.

Living things that are well adapted to their environment survive and reproduce. Those that are not well adapted don't survive and reproduce. An **adaptation** is any characteristic that increases **fitness**, which is defined as the ability to survive and reproduce.

★ What characteristic of the mice in figure 1 was an adaptation that increased fitness?

The table describes four female mice that live in a beach area which is mostly tan sand with scattered plants.

Characteristics of each female mouse	Color of Fur			
	Black	Tan	Tan and Black	Cream
Running speed	8 cm/sec.	6 cm/sec.	7 cm/sec.	5 cm/sec.
# pups produced by each female	0	11	3	0
Age at death	2 months	8 months	4 months	2 months

★ According to the definition given for fitness, which mouse would biologists consider the fittest? Explain why this mouse would be the fittest.

★ If a mouse's fur color is generally similar to its mother's color, what color fur would be the most common among the pups?

¹ Teachers are encouraged to copy this student handout for classroom use. A Word file (which can be used to prepare a modified version if desired), Teacher Preparation Notes, comments, and the complete list of our hands-on activities are available at <http://serendipityproject.org/edu/sci/biol/evo/>.

Name: _____ P# _____ Date: _____

Flame Test Lab

Purpose
To observe the characteristic colors produced by certain metallic ions when vaporized in a flame; and to identify an unknown metallic ion by means of its flame test.

Materials & Equipment

- wooden splint
- Bunsen burner
- 7 different metallic ions in solution
- spectrometer
- waste beaker with water

Procedure

1. Fill a beaker two-thirds of the way with water to dispose of used wooden splints.
2. Set up Bunsen burner. Adjust the gas and oxygen flow to produce a hot blue flame.
3. Take a wooden splint from the metal ion solution and insert into flame. Before the wooden splint begins to burn, record the color of the flame; hold the using the spectrometer record the wavelengths of the metal's visible atomic spectrum.
4. Place the used splint in the waste beaker for at least one minute before disposing of splints in trash can.
5. Repeat steps 3 through 4 for all 6 ions.
6. Obtain a splint from the unknown solution. Repeat steps 3 through 4.

Data

Table 1 - Observed Flame Colors & Visible Atomic Spectrum Wavelengths

Solution	Metal Ion	Flame Color	Visible Atomic Spectrum Wavelength (nm), nm
NaCl	Na ⁺		
KCl	K ⁺		
LiCl	Li ⁺		
CaCl ₂	Ca ²⁺		
StrCl ₂	Str ²⁺		
CuCl ₂	Cu ²⁺		
BaCl ₂	Ba ²⁺		
Unknown	—		

Data Analysis

1. Based on the flame color what could the unknown solution be?

Original Document: CLADOGRAPHY WATER What is a cladogram? It is a diagram that portrays the evolutionary relationships between the groups. It is based on phylogeny, which is the study of evolutionary relationships. Sometimes a cladogram is called the phylogenetic river (although technically, small differences between the two). In the past, bions would group organisms based solely on their fanic appearance. Today, with the advances in the gene and biohamic, bions can look more closely at the individuals to discover their pattern of evolution, and group them accordingly - this strategy is Called Cladistics of Evolutionary Classification is the form of dwarfs that looks at the characteristics of organisms that are considered "innovations", or more recent characteristics that serve some kind of prophecy. (Trying on what the word "innovation" means in regular language.) These characteristics appear in later organisms, but not previous and are called Derived Characters. Part I - Analyze the cladogram examine the sample cladogram, each letter in the diagram points to a derived ram, or something different (or more recent) than what was seen in previous groups. Combine the letter to your character. Note: This cladogram was created for simplicity and understanding, does not represent the established phylogeny for insects and their relatives. 1. _____ 2. _____ 6 legs 3. _____ segmented body 4. _____ Double wings set 5. _____ cerci (abdominal apophyses) 6. _____ Breaking mouths 7. _____ Legs 8. _____ Antenna curly part II - Create your cladogram to Making a cladogram, you should first look at the animals you are studying and establishing characteristics that they share and those who are based on each group. For animals in the table, indicate whether the characteristic is present or not. Based on this grain, create a cladogram like the one above. For white blood cells, a low count can be caused by an immune disorder or even cancer. White blood cells are often considered cancer markers in a blood test. A high white cell count means you can have an infection. All of these results require additional tests to see what is happening. Cholesterol level Your HDL (good cholesterol) and LDL (bad cholesterol) levels can be determined through blood tests as well. It is better if your HDL is more than 55 - usually, the higher this number is, the better. For LDL, you want your levels below 100 - the lower the better. Total cholesterol should be between 180-200. High cholesterol can lead to heart disease, so it is important to keep these numbers under control. Prostate concerns In men, blood analysis tests can detect specific antigen of the prostate (PSA), a protein made by the prostate. By testing PSA levels, doctors can detect signs that a man may have an enlarged prostate, inflammation or even prostate cancer. PSA is just an indicator, but high blood levels definitely deserve additional attention and testing. It is important to make sure that your prostate is healthy and has problems as soon as possible. Testosterone free and estradiol (estrogen) testosterone and estrogen play important functions in the health of men and women. For both sexes, low testosterone can lead to bad mood and depression, low libido and less muscle tone and mass. Meanwhile, estradiol is an important factor in healthy bone density in men and women. Low levels give you a higher risk of osteoporosis and bone breakage due to falls. In addition, low estrogen levels can be an indicator of increased risk of heart disease. Your blood can tell you about your general health. If you have concerns about how you have been feeling, it is not too tight about asking for blood dwarf tests. Get your blood test results explained so that you know exactly exactly Going. You can even see the results of online blood tests. More from ReesthonsAnswered. net in your school days, you probably did tests that included multiple-choice answers. And sometimes the difficulty of these questions was aggravated when one of the answers was "all the above options". The moment (and growth) going to buy an equipment that costs \$100,000. How do you finance the purchase? giving you a monthly payment of \$8,333.3. Your monthly payment is \$1,797 and there is no prepayment penalty. -Size companies don't have money piles out there, but if you're the exception and you can get the discounted equipment and don't need to add debts, opt for the A.MeanTime option if you have strong monthly Cash flow and does not have much debt to the service, option B can be a great option. For equipment in small parts, it tends to be the most pacifiable option. An interest rate of 3 % is more than manageable, especially for customers who count interest rate tales that are in total of 20 %. And without pre-payment penalty, if you somehow end excess money, you can always pay the balance of the loan. More often than not, we recommend option C to our customers, even those who are legitimately considering the first two first two .laripse .etrom ad laripse amu ed otsoipo zilef o © Á essE .laicnetop me setnelic sues siam adnia rarohlem arap etnemavon sadiVAd rasu ed edadililbissop a odnirba - arepse euq od etnemadipar siam omits © Árpme esse ragap eDop .Ácov .axiac ed oxulf e otnemiscerc ed axat aus ratnemua arap echnac amu rad ehl ale .adivAd amugla odinimussa, es .eug ed es- erbmeL .savitatepxe saus ratnemua e rescerc arap rasu edop aserpme aus euq atnemarref amu © Á adivAd ed levÁozar edaditnauq amu - © Á adivAd atium etnematre e - mior asioc amu © Á adivAd a euq ed largp oFÁSÁpcrep amu atsixe arobmeL .sadiVAd rimussa ed odem mÁT serodcnoerpme sotuM .soxiab soruj ed omits © Árpme mu rimussa ed zev me oriehnid uogap odnatuq uozimonoce Ácov euq seraVAd ed serahlm socotop so ragen medop omits © Árpme essed soruj sO .orac siam otium omits © Árpme mu ritnarag a odeÁrof res edop Ácov e sadatimil ofAs seVÁSÁpo saus .etnepier eD ?oriehnid ed avitacifngis siam otium atinauq amu rahag arap oriehnid ratsag escirp Ácov euq me ofÁSÁautis amu revuoh es ecetnoqa euq o uO ?ovitacifngis otsag mu ajixe m© ÁDmat euq aicnÁgreme ed opti mugla revuoh es ecetnoqa euq O .oEAm Á oriehnid ues od etrap roiam a odnasu .etnemadapicetna otnemapique olup ragap ediced Ácov .seVÁSÁpo siam ret acifngis euq o .edadililbixel a © Á ossid ovitom O
