Font release note Cancellaresca Script NormalMacromedia Fontographer 4.1.5 Cancellaresca Script NormalCancellaresca Script NormalMacromedia Fontographer 4.1.5 2/11/99CancellarescaScriptNormal Tags: Cancellaresca Script, Script, cancellarescascriptnormal.ttf, Windows font Characters sample Font archive files # File name Size Download 1 cancellarescascriptnormal.ttf 69.5KB Download 1 styles for Windows250 charactersFree for Personal UseFree for Commercial UseModification AllowedRedistribution Allowed You can use this font in any of the following places. Read the full EULA text for details about each license. If you have a usage in mind that's not covered by these licenses, contact us and we'll see what we can do. For the most common uses, both personal and professional, for use in desktop applications with a font menu. For example: Install the font on your Mac OS X or Windows system Use the font within desktop applications such as Microsoft Word, Mac Pages, Adobe InDesign, Adobe Photoshop, etc. Create and print documents, as well as static images (.jpeg, .tiff, .png) Desktop licenses are based on the number of users of the fonts; in other words, the number of computers in which the font will be installed. You can change the number of users by clicking the quantity dropdown option on Buying Choices or Cart pages. Please be sure to review the listing foundry's Desktop license agreement as some restrictions may apply—such as use in logos/trademarks, geographic restrictions (number of locations), and products that will be sold. Adding users later. Desktop licenses are cumulative. If you require a Desktop license that covers additional users, simply place a new order for the same Desktop package, for the number of additional users. Cancellaresca Script Desktop EULA Webfonts can be used across multiple websites/domains as long as the websites/domains all belong to the single License Owner, and the pageviews are not exceeded. Agencies responsible for multiple clients' websites, for example web design agencies or hosting providers, may not share a single webfont license across multiple clients' websites. Every time the webpage using the webfont kit is loaded (i.e. the webfont kit CSS which holds the @font-face rule is called) the counting system counts a single pageview for each webfont within the webfont kit. For usage in graphic images shown on the website, consider a Desktop license instead as most allow for it. This font's webfont license is: Annual You get a total number of prepaid pageviews that can be used over time. This means that you will pre-pay for a number of pageviews, then you'll have to come back to order more after your site has been viewed that number of times. For example, if you order 250,000 page views, when your webpages using the webfonts have been viewed 250,000 times, you will need to buy the webfont package again for an additional number of prepaid pageviews. Pageviews are valid for 1 year. Cancellaresca Script WebFont EULA Select this license type when you are developing an app for iOS, Android, or Windows Phone, and you will be embedding the font file in your mobile application's code. This font's app license is: For One Year Unlimited installations of one app title for one year. Cancellaresca Script App EULA A server license is required for sites, web apps, or services that allow a non-licensed user to utilize the font to create a product (for example, personalized t-shirts, PDF receipts, business cards, and pictures with captions, et cetera). This license is valid for one year and is renewed each year that the font remains in use. The price is based upon the number of servers on which the font is installed. Development servers do not count toward the limit. A font downloaded with this license cannot be used in SaaS, where the service is the product rather than the item that is created. Not to be confused with... The 'Server' name can be a bit slippery. Server fonts can be installed on a server and used by remote users or automated processes to create items. These licenses are fairly common for e-commerce websites that allow their customers to interact with the font via the business' webpage interface, customize a printed hard-good product, and they'd purchase/receive the hard-good product. This is not to be confused with multiple multi-user Desktop licenses. Desktop font licenses are based on the number of users of the fonts; in other words, the number of computers in which the font will be installed. Cancellaresca Script Server EULA You can use an ePub license to embed the font in an electronic publication such as an eBook, eMagazine, eNewspaper, or interactive PDF. An ePub license is based on the number of publications in which the font is used. Each issue counts as a separate publication. Regional or format variations don't count as separate publications. Updated versions of publications that are free to previous customers do not need a new license; otherwise, each new version that is released counts as a separate publication. For font usage in graphic images shown as the ePub cover, consider a Desktop license instead as most allow for it. Cancellaresca Script ePub EULA You can use this type of license to embed fonts into digital ads, such as ads built using HTML5. We'll supply a kit containing webfonts that can be used within digital ads, such as banner ads. This kit may be shared with third parties who are working on your behalf to produce the ad creatives, however you are wholly responsible for it. HTML5 ads use webfonts, so why purchase a Digital Ads license rather than a Webfont license? There are a few reasons, such as the Digital Ads EULA having terms that enable usage in digital ads and on advertising networks. Digital advertisements also have different usage patterns compared to websites. Most websites generally have consistent pageviews month-to-month whereas advertising impressions can vary wildly month-to-month. Prices reflect this, making it much less expensive to use a Digital Ad license. If you know the number of impressions the campaign requires, that amount can be ordered before the campaign begins. For campaigns where number impressions is unknown until the end of the campaign, you can true up at the end of each calendar month. Impressions are valid for 4 years. Cancellaresca Script Digital Ads EULA A font is the combination of typeface, size, weight, slope, and style to make up a printable or displayable set of characters. Font characters include letters, numbers, symbols, and punctuation marks. It is important to be intentional when choosing fonts because they can affect readability, influence tone, and reflect professionalism all of which will influence how ideas are communicated. Font vs. typeface Although they have different meanings, people often use the word font interchangeably with another typography term, typeface. Think of typeface as an entire typography family, and a font as a specific size, weight, and style of a typeface. For example, Times New Roman is a typeface that defines the shape of each character. Within Times New Roman, however, there are many fonts to choose from, such as different sizes, italic, bold, and so on. Font technology Font technology has come a long way since the days of printing presses and individually arranging typeset blocks. Instead of carving font blocks, typographers now design fonts digitally. One of the earliest types of digital font display styles used bitmap graphics. Fonts would be displayed using pixels, which led to characters looking blocky and having irregular edges. The main problem with these bitmap fonts was their scalability. When enlarged or zoomed in, the character's individual pixel makeup became obvious, especially on curved edges, and they didn't retain the original look or shape. The vector graphic font was created in the 1980s as a replacement for bitmap graphics. Instead of relying on pixels to create characters, vector fonts were formed geometrically. Since the character images are created by mathematical formulas, scaling and zooming will not change the appearance of the font, and the curved edge will appear smooth. Vector graphic fonts became the standard with the introduction of higher-resolution displays, word processors, and laser printers.
