By Ziggy Thomas i cd's image by Horticulture from Fotolia.com Many CDs today are sold with protection installed on them to prevent people from copying them illegally. If you buy a CD, you have the right to back it up to keep the original CD safe from scratches or other harm. The protection on the CD can make this difficult if you do not have the right software. Many companies make software to copy CDs that are protected into any format such as ISO. You can search the Internet or go to an electronics store to buy the software needed. Install the protected CD burning software by inserting the disc or downloading from the Internet and following the installation instructions. There are many different programs that can copy a protected CD to ISO such as ISO Ripper or IsoBuster Insert the CD you want to copy into your computer. Start the program you installed and follow any set-up instructions such as selecting where to write copied files. (Make sure you choose somewhere you will remember and be able to find so you have access to your newly copied files. You may want to make a folder where all copies will be held together.) Upon installation, most programs create a default folder in which to save copies. Copy your CD into ISO format. Most copy programs are straightforward and require you simply to select a copy destination if not done already. Click "Copy to ISO" once the CD is entered because it automatically recognizes there is a CD. IsoBuster works this way; ISO ripper only requires you to open "My Computer" then right-click the CD drive and select "Rip ISO Image." Leave the CD in the drive and wait for the program to complete the copy (a message will appear telling you when it is done). The ISO file will be saved in the directory that you set up earlier. Remove the original CD from the drive. i Jupiterimages/Photos.com/Getty Images Since their introduction in the 1980s, CDs have become a regular part of the lives of most computer users. A blank CD can be used to archive more than 700MB of data, or to create an audio CD with up to 80 minutes of music. Windows 7 lets you burn data and audio CDs without the need for third-party software. Data CDs can be formatted to be compatible with Windows computers only or with most computers and electronic devices. Insert a blank CD in your CD/DVD-ROM drive. Double-click "Computer" on your desktop or click "Start," then "Computer." Double-click the CD/DVD drive. Enter a name for the CD in the "Disc Title" text field. Click "Like a USB Flash Drive" to format the CD with the Windows Live File System. Click "Next." Open "Computer" when the disc is formatted. Double-click the CD/DVD drive. Drag and drop files to the CD. The files will be copied to the CD. Eject the disc when done. You can add additional files to the CD until it is full. Insert a blank CD in the CD/DVD-ROM drive. Double-click "Computer" on your desktop or click "Start," then click "Computer." Double-click the CD/DVD drive. Enter a name in the "Disc Title" field. Click "With a CD/DVD Player" to burn a Mastered CD that is compatible with most computers and CD players. Click "Next." Drag and drop digital music or data files to the CD. Click "Burn To Disc." Choose a recording speed from the drop-down menu. Click "Next." If all of the files are digital music files, like MP3s or WMA files, you will be prompted to create an audio CD or a data CD. Click "Next." If you are burning a data disc, the files will be written to the CD and the disc will automatically eject from your CD/DVD drive when the burn is complete. If you are burning an audio CD, Windows Media Player will open with the files in the "Burn" list. Click "Start Burn." The disc will eject when the audio CD is burned. For as long as the Windows 11 preview builds have been available, they've required you to upgrade from Windows 10. Now, Microsoft has announced that it is releasing Windows 11 as an ISO, which means you can do a fresh Windows 11 install or an in-place upgrade. Upon installing the ISO, you'll go through what Microsoft calls the "out of box experience," which is the installation process that's designed to get you excited for all things Windows 11. If you're curious about what getting a brand new Windows 11 PC will feel like, downloading the ISO and installing it will be exactly what you want to do. Microsoft says it added the ability to name your PC during the setup experience. You'll also get to experience the Get Started app that's designed to help you get going on your new Windows 11 PC (even if it's not actually a new one). The specific build available now is Windows 11 Insider Preview Build 22000.132. This is the build that contains the new and improved Windows 11 Clock App, which offers Focus Sessions. You can also use this build to try out the new Snipping Tool, which has received a lot of praise so far. Just remember that if you choose to use this ISO to do a clean install of Windows, you'll be deleting all of your files. Ensure you've backed up any files that you want to keep because they will be gone after you do a clean Windows 11 install.
