Amoeba Sisters Video Recap: "Photosynthesis and Cellular Respiration"

NOTE: This recap compares two Amoeba Sisters videos: photosynthesis and cellular respiration.

<p>1. In photosynthesis, what are the two major reactions that take place?</p> <p>_____</p> <p>_____</p> 	<p>2. Where do each of these reactions take place?</p> <p>_____</p> <p>_____</p> 
<p>3. In aerobic cellular respiration, what three major steps are involved?</p> <p>_____</p> <p>_____</p> <p>_____</p>	<p>4. Where do each of these three major steps take place (for eukaryotes)?</p>  <p>• _____</p> <p>• _____</p> <p>• _____</p>

Formula Illustrations

For the following formulas, (1) determine whether the formula is photosynthesis or cellular respiration, (2) circle the products, and (3) creatively illustrate each reactant or product in the box underneath.

5. Formula is for: _____

Limiting Factors

1. List three factors that could affect the rate of photosynthesis.

2. A group of students investigated the effect of light intensity on the rate of photosynthesis using pondweed. The equipment is shown below.

3. Suggest three possible factors that could affect the rate of photosynthesis.

4. The student counted the number of bubbles produced per minute and the length of different sections. The results are shown below.

Distance of lamp from leaf (cm)	Number of bubbles per minute
10	10
20	20
30	30
40	40
50	50

5. Use the data to complete the graph below.

Comparison of Photosynthesis and Cellular Respiration

	Photosynthesis	Cellular Respiration
Source of Energy	Light energy	Chemical energy (from food)
Raw materials used	Carbon dioxide and water	Glucose and oxygen
Materials produced	Glucose and oxygen	Carbon dioxide and water
Where it occurs	Chloroplasts	Mitochondria
Where it occurs in plants	Leaves	All parts of the plant
Temperature of each process	Warm	Warm

Photosynthesis Worksheet

QUESTION 1

1. What are the raw materials for photosynthesis?
 2. What are the products of photosynthesis?
 3. Where does photosynthesis take place in a plant?
 4. What is the role of chlorophyll?

QUESTION 2

1. What are the raw materials for cellular respiration?
 2. What are the products of cellular respiration?
 3. Where does cellular respiration take place in a plant?
 4. What is the role of mitochondria?

QUESTION 3

1. What is the difference between photosynthesis and cellular respiration?
 2. How are they related?

QUESTION 4

1. What factors affect the rate of photosynthesis?
 2. How do these factors affect the rate of photosynthesis?

QUESTION 5

1. What is the limiting factor in photosynthesis?
 2. How can you identify a limiting factor?

Two factors affecting photosynthesis worksheet answer key. Limiting factors of photosynthesis worksheet. Factors that affect photosynthesis worksheet. Factors affecting photosynthesis answer key. Factors that affect the rate of photosynthesis worksheet.

Creative Commons "Sharealike"Select overall rating(no rating>Your rating" required for Your happiness.It ànice to leave a feedback.Something "À" gone wrong, please try again later.goodEmpty answer doesn't make any sense to enduserThanks for sharing!Empty answer doesn't make any sense to enduserIn resources. By designing and drawing the shape of the graph itself, one hopes that one can better understand what is happening in every point of the graph. Q9: The graph provided shows the speed photosynthesis when intensity changes at two CO2 concentrations. BLA velocity of photosynthesis "À" always higher" with a carbon dioxide concentration of 0.4%. BCarbonium dioxide is a reagent and raw material necessary for photosynthesis. CLa speed of photosynthesis "À" always higher" with a carbon dioxide concentration of 0.2%. AA factor that must be removed before a reaction occurs BA factor that must have limited impact before a reaction occurs AC factor that accelerates the speed Reaction factor without depleting DA factor limiting speed of a Q8 reaction: The graph shows the ratio of temperature to speed photosynthesis. As CO2 concentration increases, the rate of photosynthesis increases continuously. Which of the following is correct about the graph? What factor may be increased to allow the speed continue to increase above 50 lux? Temperature, carbon dioxide concentration and intensity light can affect the speed photosynthesis. The enzymes needed for photosynthesis have been denatured. Decrease Bincrease Chave no effect on Q2. Why© an increase in carbon dioxide concentration provoche"À an increase in speed photosynthesis? By decreasing intensity luminous from DA sàmsans a decrease in the available reagents needed for photosynthesis. water feeding the "À" plant exhausted, so photosynthesis cannot take place. Our customer service team will review your report and contact you. Thank you so much for your The food produced by the plants is important, not only for the plants themselves, but also for other organisms that feed on the plants. Q7: When studying biological reactions, which of the following best explains the term "limiting factor"À"? The empty response makes no sense to end userReport this resource to let us know if it violates our terms and conditions. Increase Bdecrease Chave no effect on A decrease in availability of carbon dioxide will be the speed photosynthesis. To continue to use our site, we ask you to confirm your identity human. Another factor, such as intensity light, is limiting the speed reaction. Carbon dioxide concentration BTemperatura Intensity bright Oxygen concentration Q5: Why© a decrease in intensity light results in a decrease in the speed photosynthesis? Which of the following best describes this correlation? Oxygen concentration Intensity light CTemperature AA Decrease in intensity luminous means a decrease in energy photosynthesis. Last updated 8 March 2018Suitable for medium and high school students in KS3 (possible KS4). KS4).
